

Is your laundry process *lean*?

Improve your productivity, ergonomics, throughput, costs, and employee satisfaction with Americas 21st's comprehensive lean-process analysis of your present work flow. The two-day onsite study looks at current work flow, material handling and set-up and makes recommendations for improvement by eliminating waste – activities that add handling and cost but not value. The study can be extended one-day at an economical added cost to include the normally-separate and more comprehensive stock room-mending systems analyses.

A half-day presentation normally scheduled within 30-45 days of the study provides a written and oral roadmap for improving processes, throughput, and operational results. Americas 21st has nearly two decades of experience in designing and implementing just-in-time processing systems in various manufacturers, processors, and industrial laundries. Its work has been recognized with major awards for *Best Plants and Best Practices*, has been the subject of many trade publication articles, and has brought rapid payback with outstanding productivity gains.

The company can also provide various ergonomic equipment, production pace timers, and other accessories to enhance productivity. Its training staff also provides team and management training services to get everyone on the same page towards becoming a leaner, better competitor.
