

# ***RapidMend* © Mends Processing System**

Improve your repair-sorting-assembly productivity with Americas 21st's *RapidMend* © garment repair system. In mending the key requirement is to recognize and repair garments quickly so they are returned while the route or account is still being sorted, eliminating later time-consuming, costly piecing in of goods to man-orders. System, laid out and designed for rapid repair and return to sort, includes stand-up ergonomically-sound, engineered work stations for various mending tasks, including button-sewing, patching, ID heat-sealing, straight sewing, and others. Optional scoreboard allows tracking of individual and total mends. Supplementary services include various options based on client capabilities and needs:

- On-site conversion, installation and training of management, staff in new processing approach
- Conversion, supply of new equipment, installation and technical support only
- Supply of work stations only for client self-installation

## **EQUIPMENT SPECIFICATIONS/FEATURES**

- Buttonsew:** Station features client-supplied or Americas 21<sup>st</sup>-provided industrial buttonsewer with convenient rack for handling various button types
- Patch:** Customer-supplied heat sealers are set-up on ergonomically-designed work station with productive rack to hold various colored patch rolls for rapid selection and cutting
